MOD SYNTEC BOX

DESCRIPTION

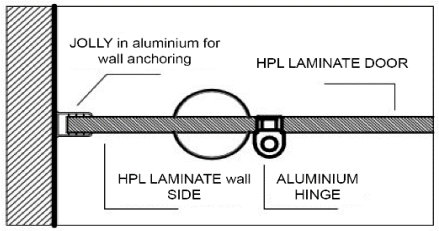

BOX

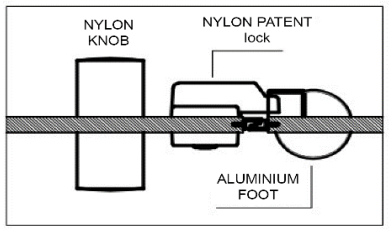

The Syntec series modular walls are made with robust HPL (High Pressure Laminate) slabs with 14 mm thickness (certificate B-s1, d0), very hard material, ideal for resistance to water, steam and chemicals.
The height of the panels from the deck is obtained with a natural anodised aluminium and nylon pin configuration.
The profiles for the wall-fixing system and the top stiffening crossbeam are also anodised aluminium.
The doors have hinges with adjustable internal springs for the return of the door to close it, keeping the room in perfect order.
The locks are nylon Patentverwag, with vacant/occupied device than can be actuated from the outside in case of emergency.
The finish of the lockers is soft safety extruded PVC and a stiff/soft co-extruded finish for the door striker.

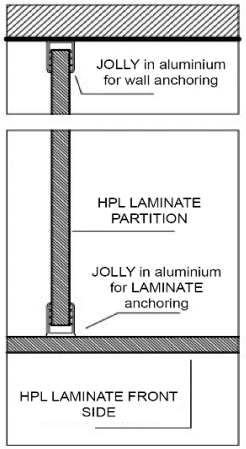

Internal

BOX dimensions		
MAXIMUM PANEL HEIGHT		210 cm
