MOD JUNIOR BOX

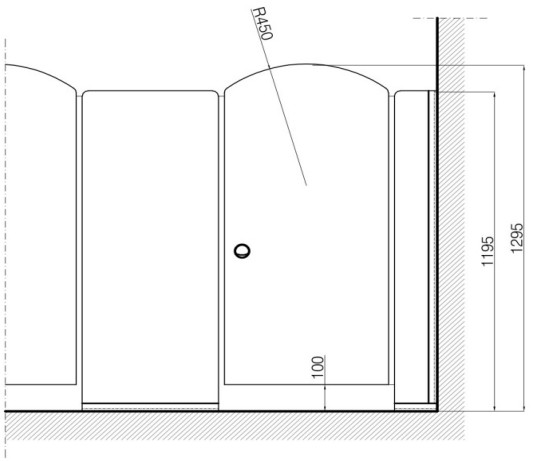

DESCRIPTION

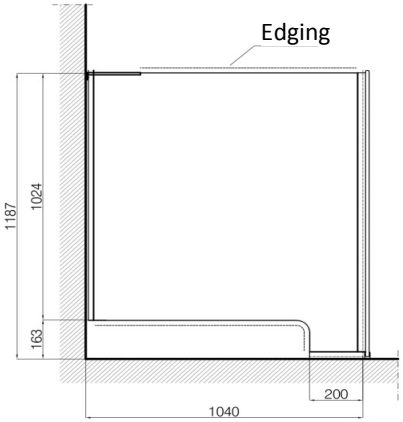

The modular walls and the boxes of the Junior series for use in preschools are made with robust HPL (High Pressure Laminate) slabs with top edged safety profile, with 14 mm thickness (certificate B-s1, d0), very hard material, ideal for resistance to water, steam and chemicals.
They are raised from the ground by a shaped form. Anodised aluminium profiles allow ground anchoring and wall and ground fixing of the dividing and front panel.
The doors, without locks, feature knob for opening; hinges with adjustable internal springs for the return of the door to close it, keeping the room in perfect order.
The finish of the lockers is soft safety extruded PVC and a stiff/soft co-extruded finish for the door striker.
