TECHNICAL DATA SHEET GRANDSTANDS

MOD. TRE/PL SEATS

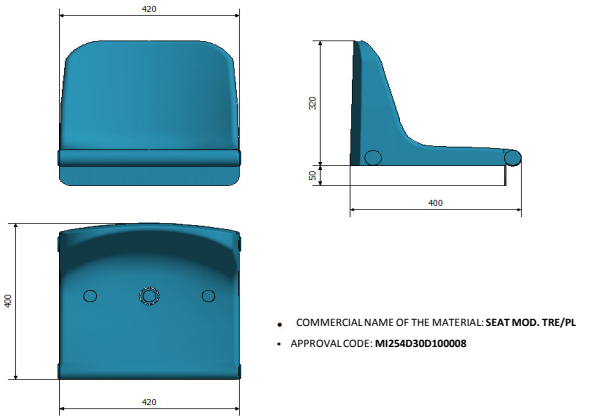

TECHNICAL DESCRIPTION

Seat with low backrest (h 32 cm.), moulded copolymer polypropylene with anti UV treatment (against the action of ultraviolet rays on the colour) and class 1 fireproof according to the legal regulations.
Polished and shiny surface featuring satin finish lines along the supporting ribbing of the seat surface.
Washing or rain water is dispersed through a series of elliptic slots in the seat surface.
The seat was tested for resistance to stress much greater than established by standards **EN 12727/00**.

Installation: there are three fixing points: one at the front on the front ribbing, two on the seat surface with places to insert special fitted caps. The use of all or part of the fixing points must be established in relation to the existing type of support and the expected stress. In particular, the fixing point created in the front ribbing serves as protection against **vandalism**. Fixing is usually carried out with nylon expansion dowels (HILTI) with stainless steel screws and washer to spread the stress (dowels-screws-washers supplied separately).
There is no supporting metal frame

DIMENSIONS	CM.
WIDTH	42
DEPTH	40
BACKREST HEIGHT	32
