# TECHNICAL DATA SHEET POOL

## MOD. TURNING PANEL

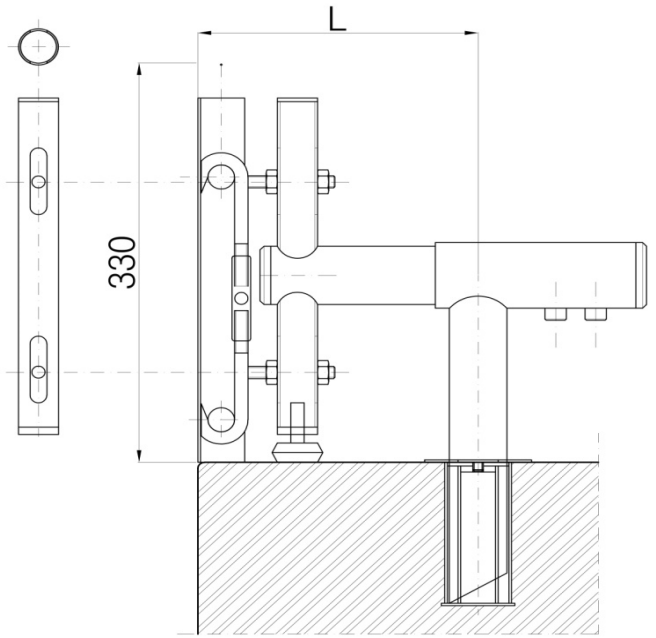

DESCRIPTION

Patentverwag turning panels are an essential accessory for holding races in deck overflow pools.
Made with stainless steel, they have a polyethylene grid panel.
The turning panels require high block assembly and are compatible with the installation of electronic time keeping systems available on the market.
Easy to install, they require installation on bayonet fixing bases (code P2345 and P2347). This system makes them easy to remove when not in use.
The position of the fixing bases and the relative supporting systems depend on the type of pool edge. It is a good idea for the space between the pool edge and the fixing base to be as short as possible.
